# World War Z-index

2013 @markjaquith

Timestamp: 07/19/2013 03:47:04 PM (10 years ago)

Author: markjaquith

Message: WORLD WAR Z-INDEX: Restoration of sanity to revisions/slider/menu z-index values.

The year is 2013. It is a period of DOM unrest. Sliders have hoarded all available z-index, leading to an arms race. What started as a local squabble soon escalated into a global conflict. The flyout menus were the first of the collateral damage, trodden underfoot by mighty warring enemies they couldn't effectively challenge. It was said they were betrayed by one of their own: the z-index-power-hungry non-active currently-hovered submenu, whose z-index-power level was over 9000!

But there is hope. A small band of heroes has emerged. Using their powers of "what were you thinking?" and "chill, no one needs a z-index THAT high", they have begun to restore order and harmony to the DOM.

See [#24736](#). Props markjaquith, aaroncampbell, helen.

# Une créature mystérieuse

2012 @nacin

Timestamp: 12/06/2012 09:01:11 AM (10 years ago)

Author: nacin

**Message:** A neditor is a curious multi-celled organism found deep in the Content Management System "WordPress". It generally subsides on good content. It has an obsession with retina-quality graphical elements, and also has a strong affinity for puns. Occasionally, ACCIDENTAL CAPS LOCK occurs. Some organisms carry British accents; these are prone to changing state but then reverting to their previous state soon after. One has shown superior sleuthing abilities, despite having hardly left its Uni laboratory. Organisms from Australia are usually found deeper in the Content Management System, most of its energy spent on locomotion.

The attitude of a neditor is best described as cranky optimism. Younger organisms are more eager, but quickly tire after working on little sleep. They eventually evolve into the cranky optimism stage in a process that generally takes three to five months.

# Les tests unitaires, pour planquer des messages

2018 @jorbin & @helen

## Options: Use most appropriate language in the test suite.

The test suite's opinion of cancer should be clear.

aaronjorbin committed on Feb 7, 2018

1 parent [fa266b4](#) commit [2c6f1b1](#)

10 tests/phpunit/tests/option/registration.php

```
47 47      public function test_register_with_default() {
48 48          register_setting(
49 49              'test_group', 'test_default', array(
50 -                'default' => 'Eat your greens',
51 +                'default' => 'Fuck Cancer',
52 51            )
53 52        );
54 53
54 -        $this->assertEquals( 'Eat your greens', get_option( 'test_default' ) );
55 +        $this->assertEquals( 'Fuck Cancer', get_option( 'test_default' ) );
55 54    }
```

## Options: Use strings in the test suite that follow community guidelines.

Also somewhat explain to future maintainers why this pairing of strings was chosen, besides this committer's musical preferences. Social opinions on cancer are fairly clear, as are commonly accepted definitions of profanity and family-friendly language.

Message: Formatting: Make terms in `wpautop()` and `shortcode_unautop()` more welcoming and inclusive.

The developer facing humor in these functions were from a different era of WordPress. Tolerance for in-jokes and other developer facing humor has decreased over the years. Terms like "pee" and "tinkle" may make some folks chuckle while for others it makes them uncomfortable.

Terminology of the past is being (or has been) re-evaluated to transform words into a language that are inclusive and welcome for all. This commit is part of that effort as it replaces.

## Audio details Underscore Template: What is a "caca URL" ?

Reported by:

[imath](#)

Hi,

[↩ Reply](#)

[- Delete](#)

I've just noticed the Audio details underscore template was using a weird label for the Audio source URL since [\[45499\]](#).

In french "caca" means poop so I'm a bit surprised and I'm wondering if it's a typo error. I've search some relative audio things to "caca" and couldn't find any.

Just in case it was a typo, I'm attaching a patch to replace this word by "Audio source URL".

```
<?php wp_underscore_audio_template(); ?>

<# if ( ! _.isEmpty( data.model.src ) ) {
    ext = data.model.src.split('.').pop();
    if ( html5types[ ext ] ) {
        delete html5types[ ext ];
    }
#>
<span class="setting">
    <label for="audio-details-source" class="name"><?php _e( 'caca URL' ); ?></label>
    <input type="text" id="audio-details-source" readonly data-setting="src" value="{{ data.model.src }}" />
    <button type="button" class="button-link remove-setting"><?php _e( 'Remove audio source' ); ?></button>
</span>
<# } #>
<?php
```

### Once upon a midnight dreary, while I coded, weak and weary,

In many a strange and curious file of forgotten lore—  
While I pondered, blaming Nacin, my notifications suddenly awakened,  
As of someone quietly DMing;—DMing me, I can't ignore.

“’Tis some contributor,” I muttered, “DMing me an idea or four—  
Only this and nothing more.”

Ah, distinctly I remember, at WordCamp US, last December;  
A mad proposal nearly laid me—down out cold—upon the floor.  
Curious, I listened closely;—to a plan I agreed with, mostly—  
A way to make our JavaScript—JavaScript which was a chore—  
Maintainable, extendable, for the future, is what I saw.  
Guten—ready for evermore.

Open here I switch to Slack, when, with many a patch and hack,  
In there stepped Omar, a JavaScript developer hardcore;  
Pronouncing all the changes fit; ready now to be commit;  
“There’s nothing else for us to do,” DMing me, “It’s done!” he swore—  
“No longer random guessing at which file need next be explored—  
Let’s move on, we’re all aboard.”

Moved all together, grouped and managed, in folders all is packaged,  
The code had all been cleaned and tidied, important parts moved to the  
“Though this change be useful here,” I said, “it is too large, I fear,  
We couldn’t manage such a patch, we’ve done nothing like this before—  
Tell me where doth go this change, change to make our codebase soar!”  
Quoth Omar, “In WordPress Core.”

I make no apologies for this commit message.  
Fixes #43055.

Message: Once upon a time not long ago,  
The admin CSS was merged in #18314.  
After a couple years as it stood,  
The mess it had become just was no good.  
One day we realized Grunt is pretty cool,  
And said "we should use this as our build tool!"  
Now we can maintain separate files with ease,  
Using @import and cssmin meets all our needs.  
Welcome to the future of the WordPress stylesheets,  
And thanks to Slick Rick for the beats.

props jorbin for the initial patch.  
fixes #26669.

Message: Build/Test: Post Travis results to Slack from WordPress/wordpress-develop

Backports [\[40604\]](#) to 3.8

Now that the WordPress/wordpress-develop GitHub repo is syncing correctly, we can use it for Travis integration.

A long long time

I Can Still remember how

That Testing used to make me smile

And I knew if I had my chance

That Travis could make the tests dance

And Maybe they'd pass for a while

But personal accounts made me shiver

with ever slack notification delivered

Red Frogs on the doorstep

I couldn't take one more step

I can't remember if I cried

When dd32 setup wordpress/wordpress-develop

Something touched nacin deep inside

The day my mirror died

So

Bye Bye Jorbin's Travis

Drove Pento to the Levee but the levee was dry

And netweb was drinking whisky and rye

Singin' this'll be the day that my mirror die

This'll be the day my mirror die

See [#40712](#).
